Directions:

Underneath the section for each growth vessel, draw a small plant pot. The first time the plants are measured, record the date, and draw a stem from the pot to correct number of inches. Add a leaf on each side of the stem. The next time the plants are measured, continue the stem to the point where the plant has grown, record the date, and add a leaf on each side. Do this every time the plants are measured.

On this side of the sheet, record observations that you have made between the plant in plain water and your group's plant.

Date	Water	My Group's Plant Name of Chemical _____
